01 Product Introduction

Micro Tip Blunt Cannula

The blunt-tip micro cannula is a small tube which is designed for atraumatic intradermal injections. Depending on the size of the inner diameter it can be used either for fat transfer or for the injections. For fillers, like hyaluronic acid filler, collagen, polylactic acid.

03 Products Advantage

Advantage

✓ LESS BRUISE

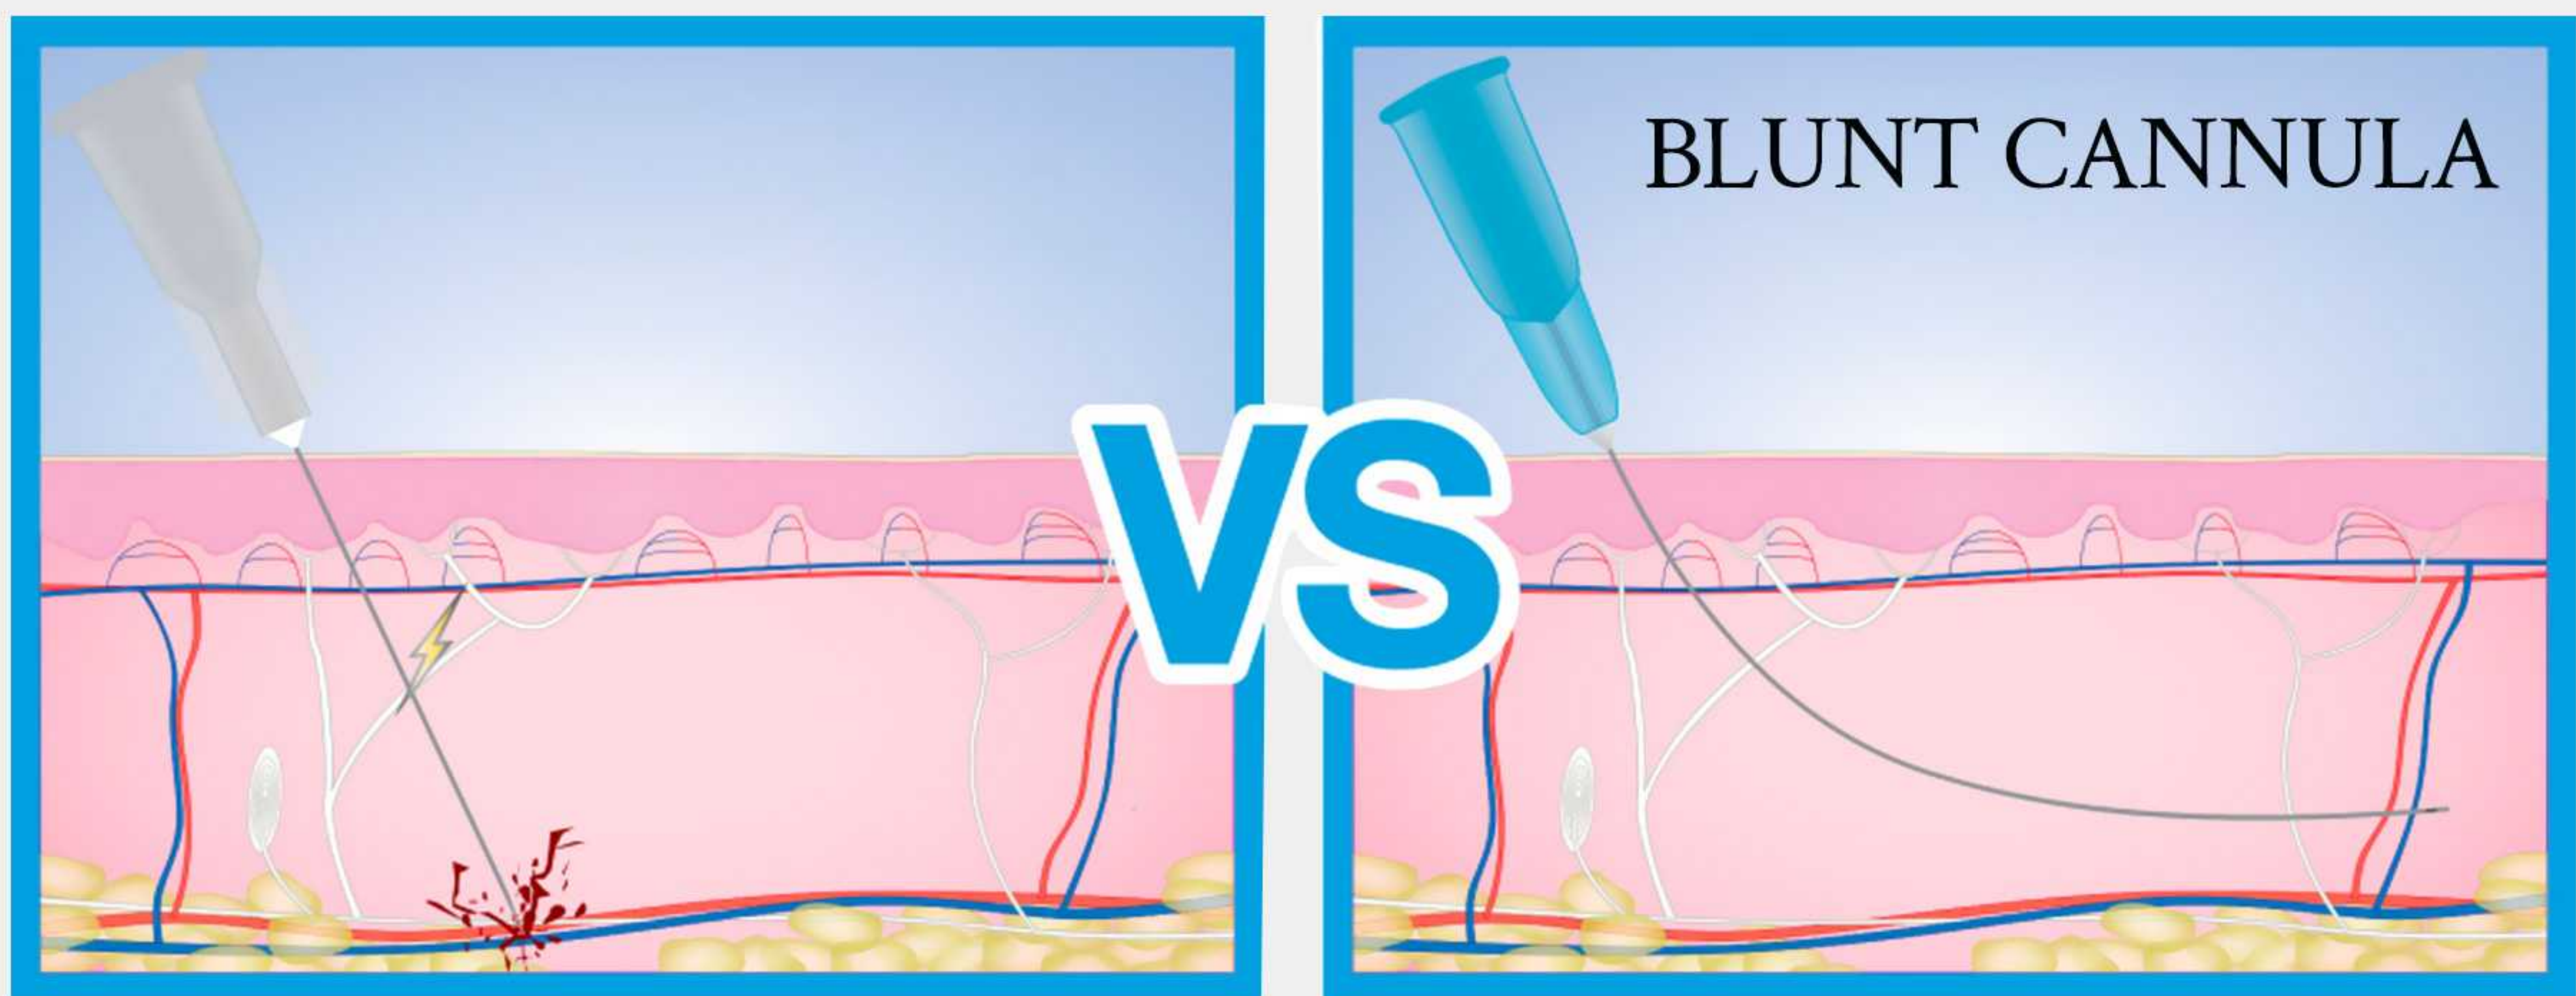

Micro cannula is much safer than using a classical sharp needle. blunt-tip slides under the skin and does not cut through vessels and tissues but rather navigates smoothly through the dermis and Sub-Q layer.

✓ BLUNT TIP

Blunt, flexible micro cannulas, your first choice for atraumatic filler injections!
Single point of entry, wider coverage

✓ FLEXIBILITY

With very good flexibility, it can greatly reduce the pain and discomfort of the user during injection.

Can navigate through tissue easily without cutting
or tearing blood vessels
